To Whom It May Concern:

My name is Vernon S. Redd. I am a chiropractic physician, residing in Albuquerque, New Mexico, where I have practiced full time since 1981. I am also board certified in Neurology, holding the status of Diplomate of the American Chiropractic Neurology Board (DACNB).

I have been using NMT: The Fienberg Technique since approximately 2003, being one of the first doctors in the country to be trained in this clinical method. I have found NMT useful in treating my patients for a wide variety of health problems, including those suffering with both acute and chronic pain including headaches, back pain, painful joints in the extremities, arthritis and neck pain. It has also proven useful in treating general fatigue, allergies and neurological and related cognitive problems.

I have utilized and applied NMT as taught by the NMT seminar manual, and have found that this system of treatment works as disclosed.

For example, I have a patient who is a PhD. psychologist who has suffered from a garlic allergy for most of his life. If he ate garlic he would break out in large hives all over his body that would cause intense itching. Using NMT as taught in the NMT manual, he can now eat garlic with out breaking out at all and with minor occational itching or no itching at all.

My very first application of NMT occurred when a women of 32 years of age presented to my office in extreme pain resulting from a sprained sacroiliac joint. She was in tears and forced to use a four leg "walker" support unit, like those commonly used by the elderly who have very poor stability when walking. Because her condition was so acutely painful I felt I could not use any of the usual chiropractic treatment methods that I might have otherwise applied in such a case. I chose to instead try out NMT which I had only learned the weekend prior. I had no idea if this would work, and frankly, was very skeptical that any positive result would occur, but felt that no harm could come of my trying it out.

After applying NMT as described in the manual I asked her to try to climb off the table, where she was sitting, and try to stand up. She immediately complied and walked around with out support or aid. She then commented, "This is weird. I don't have any pain." I asked her how much of her pain was relieved in terms of a percentage. She replied that it was 100% gone from her lower back and that only a minor amount of pain remained in her right leg. I was astonished. I have never seen or experienced anything like this in all my years of practice.

Had I used every tool and method of treatment I knew (other than NMT) to treat this woman, I would have expected not more than a 30% improvement on the first session and would have been extremely satisfied with a 50% maximum reduction in her pain. The idea of achieving a 100% remission of her back pain was unthinkable in a single treatment session.

I hope this information is helpful.

Sincerely,

Vernon S. Redd DC, DACNB
Board Certified Neurologist
